# HelixPlan

PERFORCE

PRODUCT BRIEF

Flexible Planning for Developers and Producers

Hansoft is now named Helix Plan to better reflect where our product stands today and align with the future of Perforce. With key pre-built integrations with Helix Core and Helix ALM, Helix Plan has been fully incorporated into the Perforce Helix Core ecosystem.

Helix Plan is an enterprise-class planning tool that helps teams work faster, smarter, and with unrivaled efficiency. Easy to use, it empowers everyone — team members, managers, and executives — with the insights they need to ship better products together.
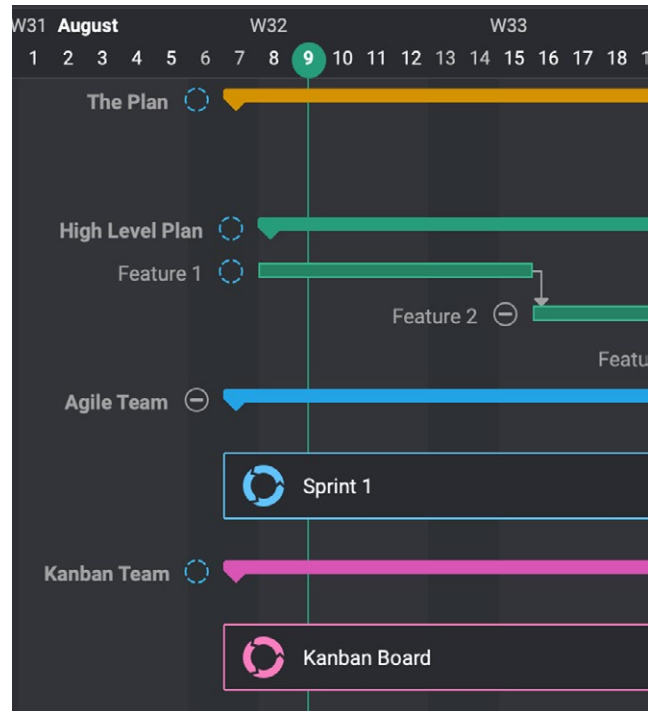

ACCELERATES PLANNING

Helix Plan is 10-100x faster than similar tools. The native Windows, OS X, or Linux client allows batch updating and removes your click/wait experience. You can change attributes and workflows on the fly. Teams powered by Helix Plan experience increased efficiency in planning.

A SINGLE SCALABLE BACKLOG

Know your scope and prevent creep. Refine, prioritize, estimate, and give any other custom attribute to your deliverables. Plus, with Helix Plan's Helix ALM integration, you can unify regulatory and non-regulatory requirements in one product backlog and Gantt view. Everyone works from a joint backlog that scales.

FLEXIBLE REAL-TIME PROJECT MANAGEMENT

Teams get to use their favorite project management methods: Scrum, Gantt, Kanban, Waterfall, SAFe and more. For example, use Gantt charts for art and sprints for code. Or, use Helix Plan's Kanban boards to visualize and optimize workflows.

Hybrid methods in a joint planning view

Real-time, highly customizable dashboards

PLANNING AND BIDDING WITH COMPLETE CONFIGURABILITY

Get all of your teams and communication on the same page. Field-level permissions allow you to create customized views for your collaborators by setting visibility and edit access to each individual field. Each user also receives 10 free ghost users to help project managers visualize large-scale planning and bidding. Coordinate cross-functionally and go beyond the spreadsheet.

TRACKS WHAT MATTERS

Release charts to burndown charts, epics to user stories, programs to portfolios — get a complete overview at all levels

of the entire product lifecycle. With resource management and portfolio allocation features, you can measure and track the metrics that matter most, including:

- Progress made
- Time left
- Scope
- Resources used and needed

DEPLOY ANYWHERE

Helix Plan can be deployed anywhere: on-prem, your own cloud, or as a SaaS provided by Perforce. It is also available via the Enhanced Studio Pack on AWS and Azure. Plus, with Helix Plan's healthcheck endpoint, you can monitor the status of Helix Plan through popular load balancers, like the one available in AWS.

KEY FEATURES

- Supports Agile, Scrum, Kanban, Waterfall, and Hybrid Methods
- Enterprise Scaling to 10,000+ Users
- Real-Time Edits and Time Tracking
- Quality Assurance, Backlog, and Issue Tracking
- Reports, Dashboards, and Burndowns
- Full Collaboration System
- Field-level Permissions
- Free Ghost Users
- GraphQL API
- Customizable Pipelines and Workflows
- Pre-built Integrations (Helix Core, Jira, Helix ALM)
