

Perforce at Monster

A Web Content Management Case Study

What is WCM?

➤ WCM isa SCM isa CM

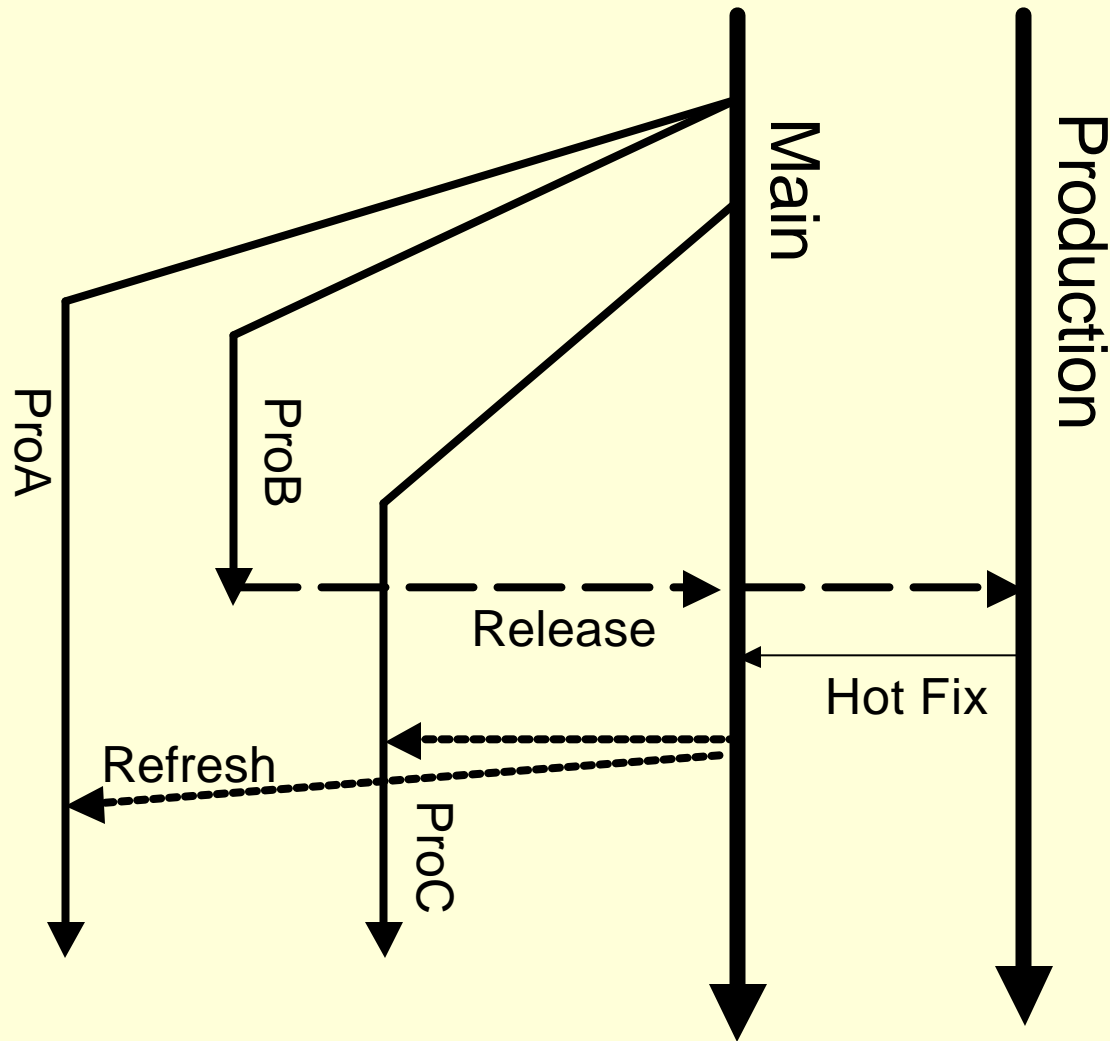

Configuration Management (CM)

Software Configuration
Management (SCM)

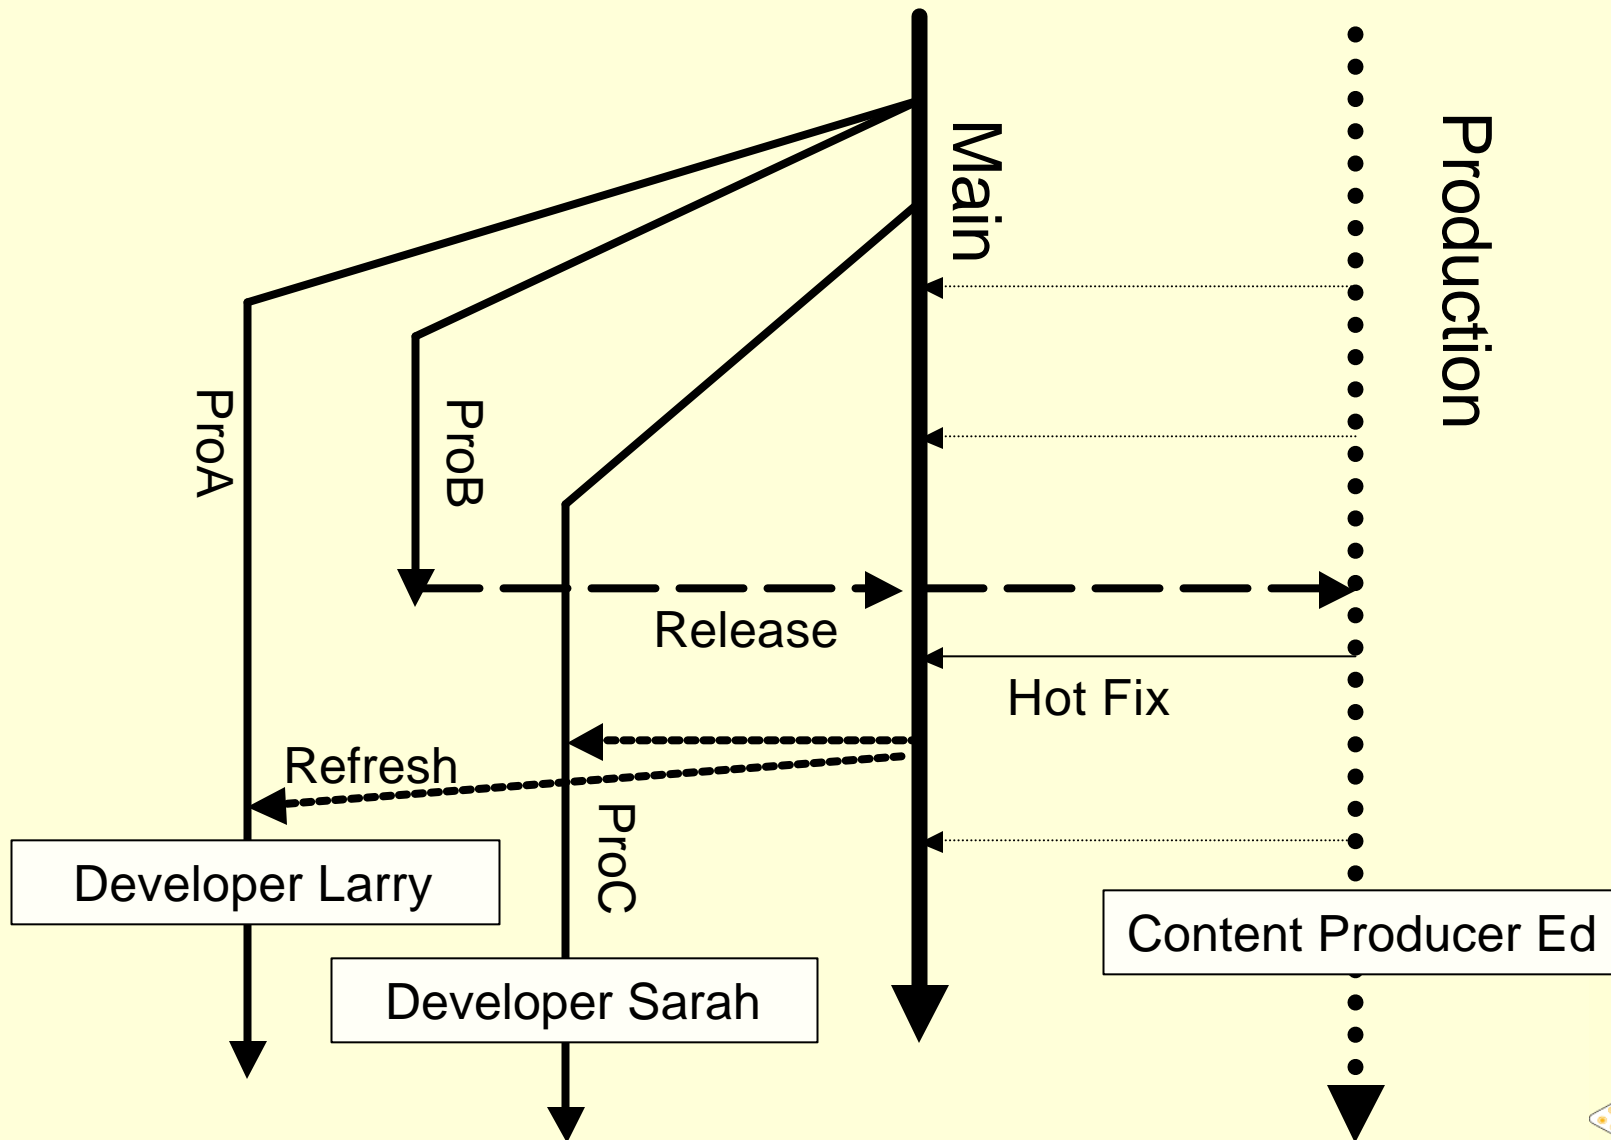

Web Content Management (WCM)

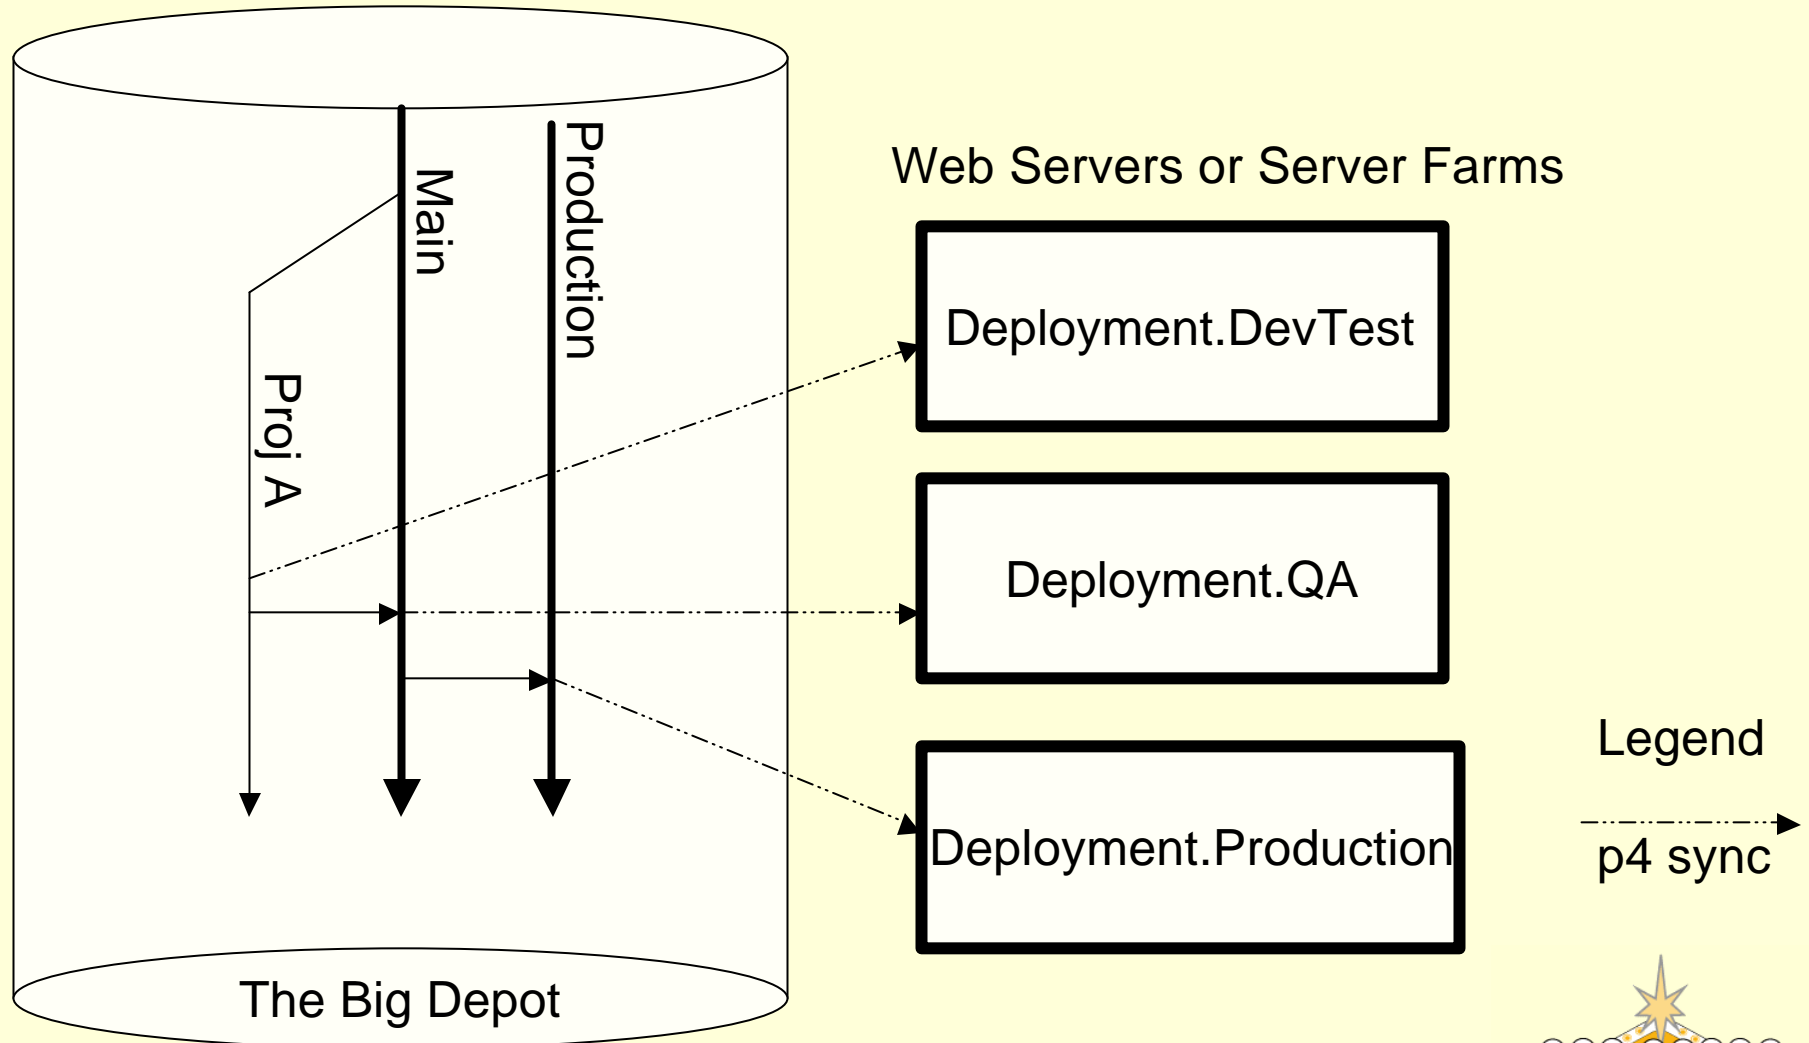

A Mainline Model for WCM

Two Paths to Production

Perforce for Deployment

Deployment Client

➤ Root: d:\wwwroot[\mysite.com]

➤ View:

//depot/Production/webroot/...

//Deployment.MySite.s409/...

➤ Sync as scheduled task

Avoid DLL Confusion

//release/ProjA

- Contains only DLLs affected by ProjA (sparsely populated)
- DLLs deposited here by official builds

//release/Production

- Contains all DLLs in Production (fully populated)
- DLLs promoted here (integ/resolve -at) from //release/ProjA

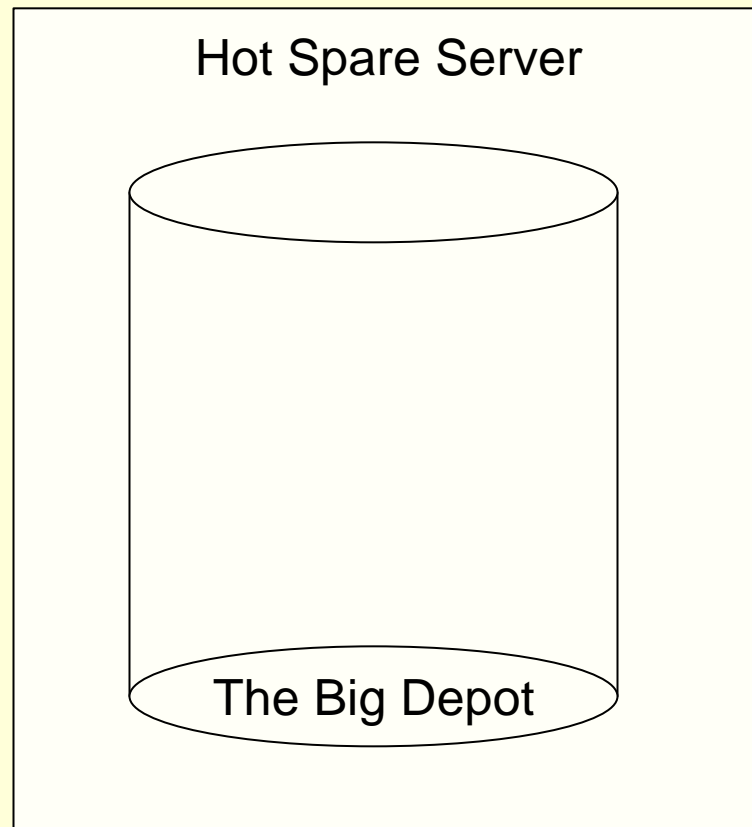

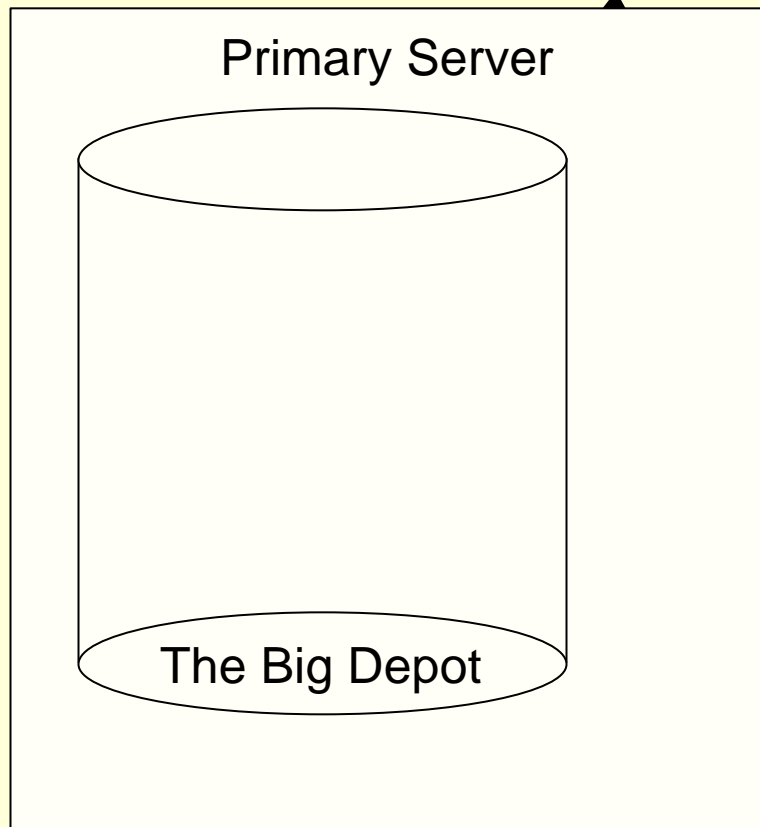

Algorithm: LD_LIBRARY_PATH for Windows

To work on ProjA, register DLLs from //release/ProjA first, then from //release/Production

Keep a Hot Spare Handy

Standard P4PORT Value

Thank You!
