

PRODUCT BRIEF

# Integrated Requirement, Test Case, and Issue Management

Helix ALM (formerly Seapine TestTrack) is an integrated suite of application lifecycle management tools that encompasses every stage of the development process, enabling managers, product owners, developers, and testers to establish clear priorities, communicate changes, and track bugs and fixes.

**HelixIM**  
for Issue Management

**HelixTCM**  
for Test Case Management

## HELIX ALM MAKES IT EASY

Helix ALM is flexible enough to meet your short-term needs and long-term goals.

- Helix ALM requires minimal IT oversight. Most administration is done at the team level, with no need for custom code.
- While Helix ALM is an integrated solution, its modules can also be used separately. You can grow into Helix ALM at your own pace, secure in the knowledge that the tools you need down the road will work with the tools you need now.
- Helix ALM supports different methodologies, whether your team uses Agile, Waterfall, a hybrid of the two, or your own custom process.

## LEAVE NO REQUIREMENT BEHIND

With Helix ALM, you can easily manage the complete requirement lifecycle.

- Manage planning, workflow, traceability, review, change management, and reporting.
- Facilitate collaboration, automate traceability, and keep projects moving forward.
- Ensure all requirements are implemented, verified, and tested.

## KEEP AN EYE ON RISK

Helix ALM's integrated tools provide superior risk management and traceability.

- Bridge the gap between development and QA.
- Quickly and easily perform coverage analysis and view relationships between items with automated traceability matrices.
- Ensure all development and QA issues are tracked, follow your company's processes, and receive the visibility they require.

### BOOST ALM EFFICIENCY

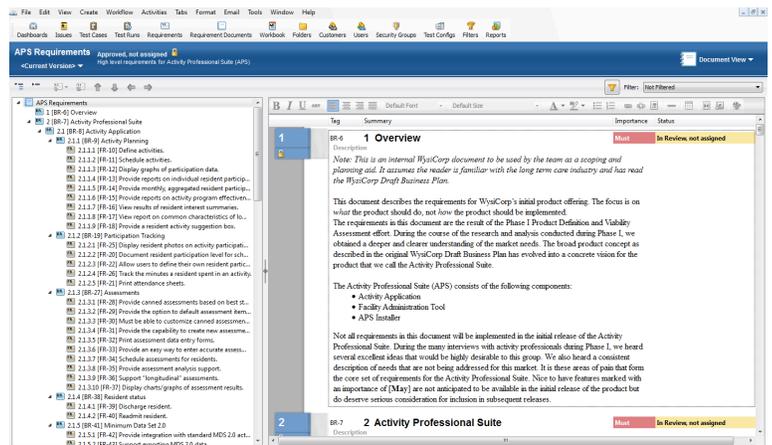

As a single, integrated solution, Helix ALM helps you eliminate steps, streamline processes, and automate repetitive tasks.

- Eliminate inefficient, time-consuming data entry.
- Streamline and automate change reviews by determining which linked items need to be reviewed when a related item changes.
- Create, organize, and run thousands of test cases, track results, and measure progress with centralized test case management.

### SIMPLIFY COLLABORATION

Even if you have a widely distributed team of developers and testers, Helix ALM makes sharing and maintaining development assets easy.

- Facilitate the requirement review process and allow stakeholders to add review notes directly in requirement documents.
- Work together using configurable taskboards to share and update the status of tasks, tests, and issues.
- Track issue-specific email conversations between developers, technical support, and customers, keeping all relevant information with the issue for quick access and historical record.
- Automatically notify users of any type of activity performed on an item with built-in email notifications.

Helix RM for Requirements Management

### INCREASE PROJECT VISIBILITY

Helix ALM gives you and your management team insight into every stage of the development lifecycle, enabling fact-based reviews of every project and team.

- Review the status of active projects, investigate test plan performance across teams, analyze bug counts across release cycles, and more from one central location.
- Trace project work from design through development and testing.
- Workflow, reporting, and audit trail features ensure the steps in your development and QA processes are measurable by team leads and managers.
- Share important statuses and metrics with management and teams via configurable dashboards.
