

PRODUCT BRIEF

Intuitive Multi-Repo Management and Collaboration for Git+

Helix TeamHub is the only repository management solution with built-in support for multiple source code and artifact repos. With an intuitive, easy-to-use interface for code review and developer collaboration, Helix TeamHub can be hosted on Perforce cloud or deployed on your own servers with Helix TeamHub Enterprise.

**SUPPORT FOR MULTIPLE REPOSITORIES**

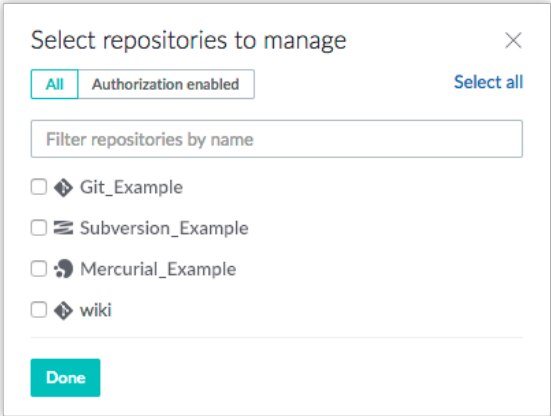

Helix TeamHub empowers individuals, small teams, and enterprise organizations to collaborate more quickly on projects that span multiple repos and repository types, including:

- Source Code Repos: Git, Subversion (SVN), and Mercurial (Hg)
- Build Artifacts: Maven, Ivy
- Docs, HTML, graphics: WebDAV

SIMPLE CODE REVIEW & COLLABORATION

With simple, branch-based code review workflows, Helix TeamHub makes it easy to ensure every change goes through a review and acceptance process – you can even incorporate automated builds and testing. Teams collaborate easily on single or multi-repo projects with:

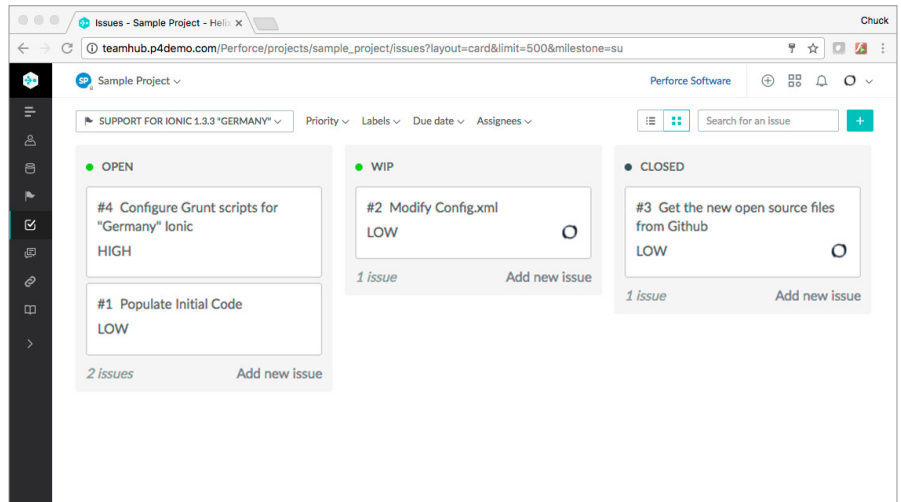

- Built-in Wiki for project-specific documentation and file-sharing
- Code browsing lets you see the big picture or examine work in progress

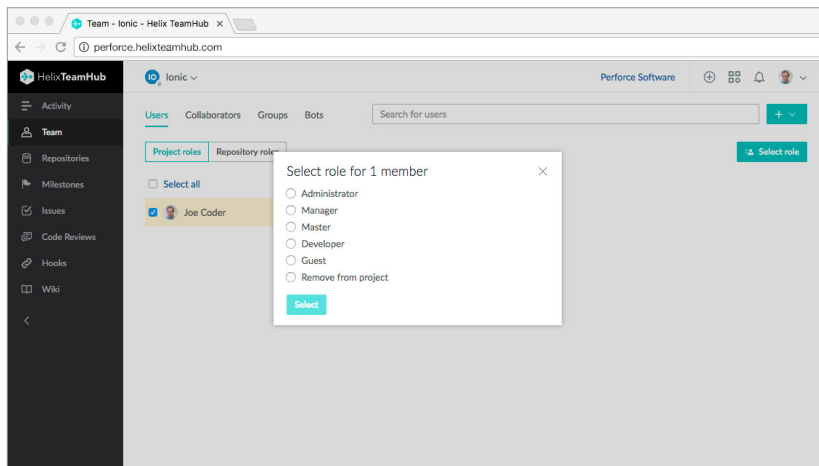

Manage multiple repository types in Helix TeamHub

- Code search across Git repos by projects, file names, commit messages, and more
- Kanban-style issue tracking for agile workflows

Already using a favorite CI/CD tool, like Jenkins or TeamCity? Helix TeamHub integrates with more than 75 of the most popular tools with out-of-the-box hooks.

Customizing member permissions in Helix TeamHub

FREEDOM WITH FINE-GRAINED PERMISSIONS

With single sign-on (SSO) and delegated user management, Helix TeamHub makes it easy for development teams to get started quickly and take control of their work—administering their own projects, adding users, and setting permissions—without waiting for IT.

Helix TeamHub’s repository and branch-level access management includes six specific roles and eight privilege levels to keep your projects and code secure. You can safely invite external clients and contractors with limited visibility collaborator accounts.

WHY HELIX TEAMHUB ENTERPRISE?

Helix TeamHub Enterprise is the on-premise option that includes Helix4Git and empowers high-performance builds for CI/CD. Helix TeamHub Enterprise accelerates and simplifies your build process from Git repos without adding overly complex tooling.

By syncing multiple Git repos and replicating content from Git clients fast, Helix TeamHub Enterprise helps you increase developer productivity with faster initial checkouts and updates, even across geographically diverse teams.

GET STARTED FOR FREE

Helix TeamHub is free for teams up to 5 users and 1GB of data. Sign up today at perforce.com/try-helix-teamhub.
