

## DATASHEET

# Implementation Services

Methodics IPLM and Helix Core (Perforce's data management tool) work together as a powerful design data management (DM) solution. We get you up and running quickly on both platforms through a Methodics IPLM implementation package.

We offer Quick Start, Enterprise, and Custom implementation options to meet the needs of any size organization. We'll install and configure your environment for optimal performance — and you can rest assured it will perform at scale, now and in the future.

## Quick Start Implementation

Our implementation team will ensure your new software is installed and configured optimally, including:

- An audit of your existing server installation to ensure your system will perform at scale.
- Expert configuration for Methodics IPLM and Helix Core within your specific environment and for your specific file types, maximizing server performance immediately.
- Script set up to automate checkpoint and validation processes to help secure system intellectual property.
- Automation of multistep processes to save time for your administrators.
- Implementation of optimal security to prevent unauthorized access to your data and IP.
- Installation of triggers to help integrate our solutions with enterprise best practices in mind.
- Readiness to install in the cloud.

## Enterprise Implementation

This package is designed for large-scale installations and configurations across multi-server environments, specifically where many variables apply to system performance and must be optimized seamlessly. Our enterprise implementation

provides you with a system capable of working at any scale and supports you with all the components in our Quick Start Implementation, plus:

- Integration with AD/LDAP.
- Integration for administration automation scripts and training.
- Protection for intellectual property through a disaster recovery (DR) process, including backup servers and scripting to quickly recover IP in the case of lost data.
- Installation of Helix Swarm.
- Installation of proxies, replicas, and brokers.
- Set up for high availability (HA).
- Training for administrators to use Server Deployment Package tools.
- Assistance in planning future scaling, growth, and integrations.

## Custom Implementation

We offer full, customized implementation support services from our team of experts to meet the needs of even the most sophisticated environments and customers. Contact us to get started with a meeting where we will establish the scope and effort of your system implementation.

## Compare Your Options

Implementation Packages	Quick Start	Enterprise
Audit existing server installation	✓	✓
Configure Methodics IPLM and Helix Core, including specific file types	✓	✓
Script set up to automate checkpoint and validation process	✓	✓
Automate multi-step processes	✓	✓
Implement security parameters	✓	✓
Install integration triggers	✓	✓
Readiness to install in the cloud	✓	✓
Integrate with AD/LDAP	✗	✓
Integrate admin automation scripts and provide training	✗	✓
Set up for HA/DR	✗	✓
Install proxies, replicas, and brokers	✗	✓
Install Helix Swarm	✗	✓
Train admins to use Server Deployment Package tools	✗	✓
Assist in planning future scaling, growth, and integrations	✗	✓

## Get Started Today

No one knows IP lifecycle management and data management like Perforce. Our Professional Services team is here for you and has the expertise to ensure a successful implementation, getting you up and running optimally, securely, and according to best practices.

Contact us today to take advantage of one of our implementation packages, or to schedule a consultation where we'll discuss your custom requirements.
