

PRODUCT BRIEF

Maximize Your Art. Streamline Your Creative Process.

As a studio's teams and projects grow, managing large digital assets becomes complicated. Locating files, reusing them, sharing them securely, and reviewing them is nearly impossible without a robust DAM (digital asset manager).

FIND ASSETS FASTER

Find assets quickly with an intuitive visual library and AI-powered search capabilities. Helix DAM automatically indexes your audio and video files so you can locate a file by simply searching its dialogue. Assets you upload get auto-generated tags and thumbnails to help you quickly find the digital asset you are looking for.

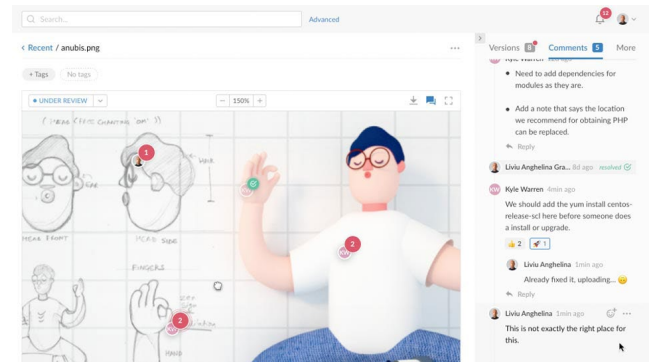

ACCELERATE DEVELOPMENT AND PRODUCTION

Streamline your creative workflows and improve collaboration. With file locking and quick access to every version of your files, give your team the visibility needed to iterate faster and avoid duplicated effort or file conflicts. With Helix DAM, you not only get a view into your entire asset library — you get a full view of your team's collaboration in real time.

SPEED UP REVIEWS

Quickly see where an asset is in the creation and review process with customizable Kanban boards. Eliminate chaos when feedback is in one place. Comment directly on an asset and see how it evolves with each revision.

ENHANCE YOUR DIGITAL CREATION TOOLS

Keep your team in their proven workflows. Helix DAM adds version control to popular digital content creation tools like Photoshop, Maya, and Blender. Leverage the Helix DAM API to integrate with your unique technology stack.

Helix DAM: Built on Perforce Helix Core

To use Helix DAM, you will need to have a Helix Core (P4D) Server.
