

## SOLUTION BRIEF

# Virtual Production Pipeline

Powered by Perforce

Virtual production projects require a suite of software tools to unite remote contributors and combine live-action footage with computer graphics in real time. Learn how Perforce streamlines and accelerates creative pipelines.

## Virtual Production Tools

### PROJECT MANAGEMENT

*Plan & Track Your Vision*

Game dev companies have used Agile for years to manage limited resources on tight timelines. Hansoft project management was created to maximize flexibility & enhance visibility.

- Set up large projects with multiple teams.
- Track progress.
- Refactor timelines.
- Visualize reporting.

### DIGITAL ASSET MANAGEMENT

*Version Everything*

Behind every virtual production project is a massive number of digital assets. Helix Core — version control from Perforce — can handle everything.

- Coordinate global contributors.
- Version large digital files & builds.
- Work using the tools they already know and love.
- Securely store and deliver assets.

### GAME ENGINES + DIGITAL ASSET CREATION

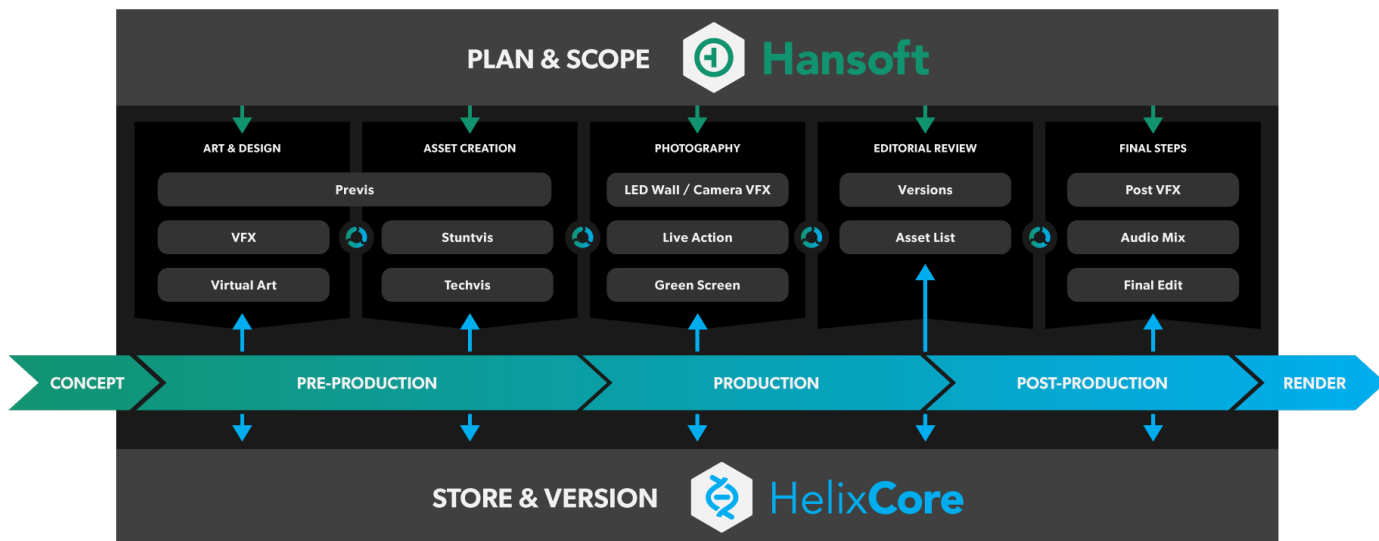

*Build Bigger*

Game engines — Unreal Engine, Unity, CryEngine, and more — are at the core of virtual production. Perforce products integrate with all popular game engines and the tools your teams already use.

- Unreal and Unity Game Engines
- Maya and 3ds Max
- Houdini

*Perforce integrates with the tools your teams love.*

**PLAN YOUR WAY**

Customize your pipeline. With Hansoft, you can set up interdependent projects and still allow teams to work their way. Plus, quickly generate reports to show progress for stakeholders.

**COMPLIANCE & AUDITABILITY**

Perforce Helix Core maintains history for every change ever made. You always know what the change was, who made it, and why.

**SECURE REMOTE SYNC**

Your version history and files are encrypted and synced across locations, ensuring remote contributors can always find and reuse fast.

**POP-UP STUDIO**

Perforce Helix Core includes an unrivaled scalable architecture with replication for high-performance. Set up a server wherever you need and take it down when the project wraps.

**CLOUD READY (HYBRID OR ON-PREMISES)**

Deploy Perforce products on AWS, Azure, or Google Cloud. And you can deploy your way with support for hybrid or on-premises installations.

**HERE FOR YOU**

Need help? Our professional services team can optimize your pipeline, manage your cloud investment, and make sure your tools are moving as fast as your teams.

**PREVENT LEAKS, BREACHES, AND HACKS**

Perforce Helix Core offers enterprise-grade security for your most valuable digital assets.

- Granular access control — down to the individual file.
- Give access to the IP addresses that need it.
- Integrate with your preferred Identity Provider (IdP).
