

Accelerate Compliance with the Perforce QAC DO-330 Qualification Pack

QAC — a static code analyzer for C/C++ — helps you achieve certification for DO-178C and DO-278 faster. This can be done using the DO-330 Qualification Pack.

DO-330 Qualification Pack

To use the output of your software development tools to show compliance with DO-178C and DO-278, you need to qualify the tool. This can be a time-consuming process.

You can make the process quicker and easier. And that's by purchasing the DO-330 Qualification Pack for QAC (for criteria 2 at tool qualification level 4).

What's In The DO-330 Qualification Pack?

We've done the DO-330 qualification work for you, so you don't have to.

The DO-330 qualification pack is made up of:

- Tool Qualification Plan (TQP)
- Tool Operational Requirements (TOR)
- Tool Qualification Data (TQD)

These documents indicate:

- The requirements for each individual message
- The test case for each message
- Review of requirements and test cases
- Test evidence

How To Use It

As long as QAC is configured and verified as described in the qualification pack, you can use the output of QAC for your DO-178C or DO-278 certification.

If required, the test suite to verify the qualification can be run at the Perforce offices or remotely.

Get Started

Get started with the DO-330 Qualification Pack for QAC.

QAC helps you achieve certification for DO-178C and DO-278 faster.
